

cmd::Cmd

```
classDiagram
    class cmd__Cmd["cmd::Cmd"]
    class zmqshell_LavfiCmd["zmqshell.LavfiCmd"]
    zmqshell_LavfiCmd --|> cmd__Cmd
```

The diagram shows a class hierarchy. At the top is the base class 'cmd::Cmd', represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. At the bottom is the derived class 'zmqshell.LavfiCmd', represented by a rectangle with three horizontal compartments. The top compartment contains the class name. The middle compartment contains three attributes: '+ requester', '+ prompt', and '+ bind\_address'. The bottom compartment contains two methods: '+ \_\_init\_\_()' and '+ onecmd()'. A blue arrow with an open triangle head points from the derived class to the base class, indicating inheritance.

zmqshell.LavfiCmd

+ requester  
+ prompt  
+ bind\_address

+ \_\_init\_\_()  
+ onecmd()
